

8.3.5. Design and Development Outputs

The design and development outputs should comply with the identified needs in order to ensure that the resulting product can fulfil its intended use.

Outputs can include information relevant to:

- Marketing, sales and purchasing
- Production
- Quality assurance
- Information for service provision and maintenance of the product after delivery and, should be provided in a form that enables verification and validation activities to be performed.

The organization is required to ensure that outputs:

- ✓ Meet the input requirements.
 - ✓ Be suitable for subsequent processes for the provision of products and services.
 - ✓ Include, or refer to, appropriate monitoring and measuring requirements and their acceptance criteria.
 - ✓ Define the characteristics of the products and services that are essential for their intended purpose and their safe and proper provision.
 - ✓ All the information of the Design and Development outputs needs to be documented either through a register or some other form.
- 

Auditing

- ✓ Obtain evidence from the projects selected to confirm that:
 - Information regarding the completion of design and development stages is available
 - The design and development process has been completed for the stage under review
 - Design and development outputs have been confirmed
- ✓ Review documented information
