

8.5. Production and Service Provision

8.5.1. Control of Production and Service Provision

The organization is required to control the manner in which products are produced and the services provided

- ✓ Documented information that defines the characteristics of the product or service is available
 - ✓ Documented information that defines the activities that need to be performed to produce the product or deliver the service is available, and that this specifies the results that are to be achieved
 - ✓ Monitoring and measurement takes place at appropriate points in the production process to ensure that both the processes themselves and the process outputs meet the organization's acceptance criteria
 - ✓ Environment and infrastructure are suitable
 - ✓ Suitable monitoring and measurement resources are made available
 - ✓ Personnel are competent and, where necessary, appropriately qualified
 - ✓ Up-to-date work instructions
 - ✓ Product and service release, delivery and post-delivery activities are implemented
- 

Auditing

- ✓ Review documented information
- ✓ Ensures competence of personnel (personal files, training records)
- ✓ Observation of measurement and monitoring resources available as well as infrastructure and environment for operation of processes
