

### *8.5.2. Identification and Traceability*

The organization must seek and record evidence that product is identified (as appropriate) and its status with regards to monitoring and measuring is identified throughout the manufacturing processes.

- ✓ Must have a process in place for the identification and traceability of outputs (physical part marking, labeling, tags, bar codes, visual indicators, part segregation, lay down areas, storage racks)
- ✓ Establish and implement a procedure to identify the product through the design, development, manufacture and delivery stages
  - Establish the identity and status of products
  - Maintain the identity and status of products
  - Maintain records of serial or batch numbers

## *Auditing*

- ✓ Ensure that product is identified (as appropriate) and its status with regards to monitoring and measuring is identified throughout the product realization processes.
- ✓ Ensure that the organization is controlling and recording the unique identification of the product.
