

8.5.4. Preservation

The organization is required to protect and preserve the product during internal processing and delivery to the intended destination

- ✓ **Identification** – Ensure that products are properly identified and do not become mixed with other orders
 - ✓ **Handling** – This may include bulk handling using moving equipment or physical contact where handling may influence product conformity
 - ✓ **Packaging** – Ensure that labeling and marking of shipped products are sufficient to enable adequate identification and traceability back through the QMS
 - ✓ **Storage** – This should include storage conditions to prevent the deterioration, damage or loss
 - ✓ **Protection** – Raw materials, in-process materials, inspected product, nonconforming product and product ready for shipping should also be identified with its status and protected from any unintended alteration
- 

Auditing

- ✓ Ensure preservation measures are taken
- ✓ Legal or regulatory requirements applicable to the preservation in the industry
