

8.7. Control of Nonconforming Outputs

The organization is required to ensure that outputs that do not conform to their requirements are identified and controlled to prevent their unintended use or delivery

Dealing with nonconforming outputs:

- Correction
- Segregation, containment, return or suspension of provision of products and services
- Inform the customer (Open and Honest)
- Obtain authorization for acceptance under concession (“Okay, this once I’ll accept the outputs if they ..”)

Conformity to the requirements are verified when nonconforming outputs are corrected.

Retain documented information that:

- ✓ Describes the nonconformity
- ✓ Describes the actions taken
- ✓ Describes any concessions obtained
- ✓ Identifies the authority deciding the action in respect of the nonconformity

Auditing

- ✓ Whether the personnel involved are sufficiently empowered with the authority to decide the disposition of the service, for example:
 - to immediately terminate the service
 - to replace the service provided
 - to offer an alternative
- ✓ The organization's customer claims and complaints processes
- ✓ Any temporary corrections that are implemented to mitigate the effect of the nonconformity (e.g. refund, credit, upgrade, etc.)
- ✓ The identification, segregation and replacement of the relevant service equipment, service providers and environment.
