

8.3.3. Design and Development Inputs

The organization has to determine the requirements essential for the specific types of products and services to be designed and developed

- ✓ What needs to be considered to design

- ✓ Standards and/or codes of practice

- ✓ Design or development failure

- ✓ Retain documented information on design and development inputs

Auditing

- ✓ Develop an understanding of how the organization identifies its own inputs:
 - products, services and processes;
 - financial, environmental, health and safety issues;
 - the organization's risks and impacts;
 - customer's requirements and expectations;
 - statutory and regulatory requirements applicable to the product or service
- ✓ Evaluate the risks, the possible implications for customer satisfaction and issues that the organization may encounter if some relevant inputs are not considered
- ✓ Review of documented information
