

# ISO 9001:2015 Quality Management System Auditor

## - Operational planning and control -

The organization is required to:

Plan

Implement and

Control

the processes necessary for the provision of its products and services.

It has to:

- Determine the requirements for its products and services.
- Establish criteria for its processes and for the acceptance of products and services.
- Determine what resources are needed to achieve conformity of its products and services.
- Implement controls according to the criteria for products and services established.
- Maintain and retain documented information to have confidence that processes have been carried out as planned and to demonstrate the conformity of its products and services.

+ Control changes and outsourced processes
